King of All the Tulips

RED EMPEROR

A LURID flame shooting into a pitch-black sky; the brilliant flashing of a cardinal among the trees; the scarlet robes of a royal retinue. All these comparisons fail to convey the brilliancy of this wonderful new Tulip. In the border it stands out like a column of fire—a color enhanced by the jet-black base.

We consider it the most spectacular Tulip ever introduced. The bloom is carried on a stem about 20 inches high; the petals are broad and unusually large, and the flower remains in good condition for several days.

To avoid disappointment (the quantity of bulbs is limited) **you should place your order at once.** In addition you secure our special **low import price of 85c. per bulb,** or **$9 for a dozen bulbs.** These low prices prevail until August 15 only.

COTTAGE TULIPS

A glorious group of Tulips particularly adapted for naturalizing. Many of these varieties have been found growing about the country houses and cottages in England and France for many years, hence the name. They are charming in groups in the borders and among shrubs, and are absolutely hardy. They have stately flowers with long, narrow cups, some elongated, with pointed petals beautifully reflexed at the edges; many of them are sweet-scented. Plant same way as all late Tulips—5 inches deep to the bottom of the bulb and 6 inches apart.

ADVANCE. The most entrancing and perhaps the most remarkable of the Cottage type, Advance is the result of a cross between Gesneriana spathulata and the Botanical Tulip Greigi. A giant, fiery red with a purplish bloom on the outside and a blue inner base. When in full bloom it resembles the Oriental Poppy. The flower is borne on a tall, erect, 30-inch stem, and lasts longer than any other Cottage Tulip. It is graced with beautiful foliage of silvery green. $2.25 per doz., $16 per 100

Dutch Hyacinths

DUTCH HYACINTHS

A special pick of the largest bulbs produced in Holland. Sound, plump, and well matured, producing strong spikes of great length —you can buy no better. This size should always be selected for pot or glass culture, as they are far more vigorous in growth and produce larger and finer flower-trusses than the smaller bulbs Unexcelled for outdoor planting for the same reason.

Hyacinths grow in any good garden soil, but a well-enriched soil induces more perfect growth and larger flower-spikes. Well-rotted barnyard manure, sheep manure, or bonemeal, liberally applied, well dug in, and mixed with the soil is very helpful. Set bulbs 6 inches apart each way and 8 inches deep (to bottom of bulb). Hyacinths are perfectly hardy, but a light covering of salt hay, leaves, or straw after the ground is frozen, will prove beneficial.

VIRGINIA GROWN. FULLY ACCLIMATIZED. SUPERIOR TO THOSE FORMERLY IMPORTED

Plant generously in your lawn (for they will be through blooming before you cut the grass), along your shrubbery border or fringing the roadside—anywhere they will grow unmolested. Grow Bulbs for Winter Cheer Indoors . . . .

RIGHT IN YOUR OWN HOME . . . IN SCHLING'S PREPARED BULB FIBER

And no need of ugly pots, either! Use a bowl of your favorite color blending with the furnishing scheme of the room. This will lend an additional charm to your plant—you will enjoy it so much more.

Our Bulb Fiber is a complete substitute for soil scientifically prepared for use in receptacles without drainage. It is clean and odorless; no saucers necessary; no fear of staining the woodwork or table coverings. This Fiber is cleverly impregnated with plant-food in such a manner that it becomes available gradually but continually, as required by the plant to assure steady and vigorous growth.

Prices of Schling's Prepared Bulb Fiber:
Qt. 25c., ½peck 75c., peck $1.35, bus. $5

Directions for Using Bulb Fiber. Wet the Fiber thoroughly until it has absorbed all the water it can hold. This is best done in a pail or pan. Then squeeze out nearly all the water, and it will be just right for planting. Fill the bowl three-fourths full, or to within a few inches of the top, according to the size of the bulb. Press down gently (never pack it down), set bulbs at the proper distance, and fill up with Fiber. Press it gently around the bulbs but *don't* pack it down.

All bulbs except Freesias, Callas, and Lilies-of-the-Valley should be kept in a dark place to develop roots before sprouting. Hyacinths, Daffodils, and Tulips require from four to six weeks; Paper-white and Soleil d'Or Narcissi and Chinese Lilies from two to three weeks. By bringing in a few bowls at intervals and making additional plantings one may enjoy blooming plants all through the winter months.

To assure continuous bloom throughout the winter, plant every three weeks. These bulbs are kept dormant on ice and must be planted as soon as thawed out. Therefore, order only sufficient for each planting, as you cannot keep the bulbs.

Hardy Lilies

All gardens need a few of these stately beauties, the blooming season of which may be extended from June to September if the proper varieties are planted. Large plantings of *L. candidum, L. tigrinum,* and the Speciosum varieties are recommended, and also the handsome, early-blooming *L. elegans* and *L. superbum.* They thrive in any well-drained garden soil, but do best in the hardy border or among shrubbery. Plant bulbs twice their depth and when frost sets in, cover with 4 to 6 inches of leaves or litter, to be removed in spring.

Prize Peonies for Fall Planting • 1937

A selection made NOW assures a special pick of the strongest roots

WE SHIP OUR PEONY ROOTS IN SEPTEMBER

Always plant Peonies in the fall, for the roots are then in prime condition. They grow well in any good garden soil. Care should be taken to keep manure a few inches away from the crowns of the plants, except the first winter, when a coarse mulch an inch or more deep may be placed directly over the plants to prevent the frost from heaving them. It is not necessary to fertilize rich soil. In poor soil, the manure should be kept 10 inches from the surface, and well mixed with the subsoil; after planting, apply manure to surface as previously advised. Never allow manure to come in contact with the roots, as it rots them. Set roots 2 feet or more apart and cover top eyes not more than 2 to 3 inches; deep planting often results in blind growth.

Our Peonies are extra-strong, field-grown roots (not divisions).

Official ratings of the American Peony Society are given where available.

Abbreviations used to signify blooming time are: E, Early; EM, Early Midseason; M, Midseason; LM, Late Midseason; L, Late.

Plant a Strawberry Bed This Summer

ENJOY YOUR OWN BERRIES NEXT JUNE

One hundred plants, with fair cultivation, will yield 30 quarts of berries the first year in a space only 4 by 50 ft.

Our Pot-grown Strawberry Plants can be set out any time during July and August, and even as late as September 15. Early plantings produce biggest crops. Set plants in rows, 1 foot apart. Allow space of 2 feet between rows for cultivation. Pinch off all runners as they appear and cover the bed lightly with leaves, salt hay, or manure in December after the ground is frozen. Remove covering in early spring; if salt hay is used, it may be left between the rows as a soil-mulch to keep the soil moist and the berries clean.

Pot-Grown Strawberry Plants

Ready for shipment July 25 to October 31. Early orders always assure strongest plants. **All varieties offered are perfect flowering.**

Brandywine. Midseason. Large; bright crimson; highest quality.
Cooper. Second early. Extremely large, bright red berries; excellent quality.
Jumbo. Midseason. Big berries of fine flavor, borne in abundance a long time.
John H. Cook. Second early. Firm, blood-red berries of good quality.
Marshall. Midseason. Of rich flavor and almost devoid of acid.
Sharpless. An excellent late variety. Fruits dark red, medium to large.

Strong, pot-grown plants of the above 6 varieties, $2 for 25, $7 per 100
Selected extra-strong, pot-grown plants of the above 6 varieties, $2.50 for 25, $8 per 100

Three Specials for the Home-Garden

Premier. Extra early. The largest and by far the firmest of all early varieties. Fruit scarlet-crimson and very luscious.
Big Joe. Midseason. Unusually healthy, vigorous, and productive. Berries large, light glossy crimson and of excellent flavor.
Chesapeake. Late. Finest and most luscious for the home-garden. Berries very large, firm, with the fine flavor of the wild Strawberry.

The above three varieties will lengthen your Strawberry season considerably and give berries for fully a month.

Strong, pot-grown plants of the above, $2.50 for 25, $8 per 100
Selected extra-strong, pot-grown plants of the above, $3 for 25, $9 per 100

Fall-Fruiting or Everbearing Strawberry Plants

As luscious as the June berries, bearing continuously from June until frost. For a heavy crop in the fall, pinch out all blossoms until July. Preserve all runners, as they, too, will bear fruit.

Mastodon. (The Wonder Berry.) The best-flavored, largest, most productive of all Everbearing varieties. Heavy crops of fine, luscious berries from September to frost. Even the runners bear fruit freely and should be left attached.
Aldrich. Another very fine and extremely productive Everbearing variety. Berries of good size and fine flavor.
Berri Supreme. Large, smooth, regularly shaped berries of fine flavor. Yields prolifically.
Progressive. Extremely vigorous. May be allowed to bear in June without impairing the fall crop.

Extra-selected strong, pot-grown plants of all Everbearing varieties, $4 for 25, $12 per 100

Introduced by U. S. Department of Agriculture

Dorsett is the most productive Strawberry. Delicious, good-sized berries of scarlet color on disease-free, vigorous vines.
Fairfax rivals Dorsett but is darker and more persistently fruiting in unfavorable weather. However, it is not as prolific and lacks the wild Strawberry flavor of Dorsett. Try both varieties.

Pot-plants, $3 for 25, $10 per 100
